Full Corn Moon

On September 2, 2020

Creating family traditions centered around nature's rhythms and patterns is an important part of planting the seeds of a love of natural beauty in our children. No matter if you have a colorful change of season or not, make a point to mark the beginning of the new season in some simple way. Autumn begins on September 22, 2020.

[Nature Tables](#)<<<Click for more info.

The nature table has a long history in school classrooms. It has historically been a small table to one side of the class upon which teachers and students have collected and displayed natural objects through the seasons of the year. The objects were to be looked at, thought about, and included in discussions and written compositions.

Providing the space and opportunity for a nature table in your classroom or home will allow your child to make first hand observations of natural objects of interest to them. Creating a nature table bridges the gap between outdoor and indoor activities.

Additional Nature Study Ideas

- ◆ Play **Follow the Leader** on a nature hike. Let your children find things to show you and then create a nature journal page together.
- ◆ Challenge: Learn the name of **one tree** in your neighborhood.
